2 research parkway wallingford ct: Tactics in Contemporary Drug Design Nicholas A. Meanwell, 2014-12-08 Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team-work at the interface between chemistry, biology and medicine. Therefore, the topic-related series Topics in Medicinal Chemistry covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of (emerging) drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level, structure-activity relationships, drug absorption, distribution, metabolism, elimination, toxicology and pharmacogenomics. In general, special volumes are edited by well known guest editors.

2 research parkway wallingford ct: High Throughput Analysis for Early Drug Discovery James Kyranos, 2004-09-18 High Throughput Analysis for Early Drug Discovery offers concise and unbiased presentations by synthetic and analytical chemists who have been involved in creating and moving the field of combinatorial chemistry into the academic and industrial mainstream. Since the synthetic method often dictates the appropriate types of analysis, each chapter or section begins with a description of the synthesis approach and its advantages. The description of various combinatorial and high-throughput parallel synthesis techniques provide a relevant point of entry for synthetic chemists who need to set up appropriate characterisation methods for his/her organisation. This is an invaluable resource for all organic and analytical chemists in the pharmaceutical, agrochemical, and biotechnology fields who are either involved in, or beginning to investigate combinatorial techniques to increase overall efficiency and productivity.
