2 2 release date geometry dash: Fuzzy Systems and Data Mining IX Antonio J.

Tallón-Ballesteros, Raquel Beltrán-Barba, 2023-12-15 Fuzzy systems and data mining are indispensable aspects of the digital technology on which we now all depend. Fuzzy logic is intrinsic to applications in the electrical, chemical and engineering industries, and also in the fields of management and environmental issues. Data mining is indispensable in dealing with big data, massive data, and scalable, parallel and distributed algorithms. This book presents the proceedings of FSDM 2023, the 9th International Conference on Fuzzy Systems and Data Mining, held from 10-13 November 2023 as a hybrid event, with some participants attending in Chongqing, China, and others online. The conference focuses on four main areas: fuzzy theory, algorithms and systems; fuzzy application; data mining; and the interdisciplinary field of fuzzy logic and data mining, and provides a forum for experts, researchers, academics and representatives from industry to share the latest advances in the field of fuzzy sets and data mining. This year, topics from two special sessions on granular-ball computing and the application of generative AI, as well as machine learning and neural networks, were also covered. A total of 363 submissions were received, and after careful review by the members of the international program committee, 110 papers were accepted for presentation at the conference and publication here, representing an acceptance rate of just over 30%. Covering a comprehensive range of current research and developments in fuzzy logic and data mining, the book will be of interest to all those working in the field of data science.

2 2 release date geometry dash: Veal: The Rise of Generation Interactive Patrick Aievoli,

2016-10-17 The purpose of this book is to investigate and discuss the premise that the current generation was constructed to be consumers for a transitional marketplace. As the economy shifted from analog to digital, consumers had to be trained to accept, use and progress within a new economic model through changes in societal and economic patterns. Those events are reflected in the habits and lifestyles of the current 12 to 25 year old demographic globally, and it has caused them to be the consummate consumer of digital goods based on events that have been created to develop them to be consumers and to be consumed. Veal: The Rise of Generation Interactive is a deft manifesto on the domestication of the young consumer into a well-cultivated piece of veal ready to be parceled off to greedy corporations as a permanent food source, while governments either ineptly or corruptly look the other way.

2 2 release date geometry dash: Leading-edge Superconductivity Research Developments Tetsuo Watanabe, 2008 This new book focuses on superconductivity which is the ability of certain materials to conduct electrical current with no resistance and extremely low losses. High temperature superconductors, such as $\text{La}_{2-x}\text{Sr}_x\text{CuO}_x$ ($T_c=40\text{K}$) and $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ ($T_c=90\text{K}$), were discovered in 1987 and have been actively studied since. In spite of an intense, worldwide, research effort during this time, a complete understanding of the copper oxide (cuprate) materials is still lacking. Many fundamental questions are unanswered, particularly the mechanism by which high- T_c superconductivity occurs. More broadly, the cuprates are in a class of solids with strong electron-electron interactions. An understanding of such 'strongly correlated' solids is perhaps the major unsolved problem of condensed matter physics with over ten thousand researchers working on this topic. High- T_c superconductors also have significant potential for applications in technologies ranging from electric power generation and transmission to digital electronics.

2 2 release date geometry dash: *Oceanography and Surface Layer Meteorology in the B/C Scale* Gerold Siedler, 2013-10-02 *Oceanography and Surface Layer in Meteorology in the B/C Scale* is a collection of papers that deals with the oceanic and atmospheric boundary layers in the region in or close to the Intertropical Convergence Zone (ITCZ) in the Eastern Atlantic. Papers discuss global atmospheric circulation to improve weather prediction and climate modeling in line with the objectives of the Global Atmospheric Research Programme (GARP). In particular, the GARP Atlantic Tropical Experiment (GATE) addresses the means of estimating the effects of smaller tropical weather systems on synoptic scale circulations. GATE also facilitates the development of numerical modeling and prediction methods. One paper compares a mathematical representation of the transport of energy by convective clouds and the cloud free environment with a relationship based on the physical structure of the cloud and environment. Another paper analyzes model simulations made for various upwelling velocities, rainfall events, wind stress events, diurnal heating cycles, and internal tidal forcing using the GATE dominant scales of tropical weather systems. The model simulations show that in the GATE C-Scale demarcation area, no single process dominates. The collection will be appreciated by meteorologists, environmentalists, merchant marines, students studying hydrology, and by people working in the general earth sciences.
