czech university of economics prague: The Czech Republic and Economic Transition in Eastern Europe Jan Svejnar, 2013-10-22 The Czech Republic and Economic Transition in Eastern Europe is the first in-depth, comparative analysis of the Czech Republic's economic transition after the fall of the Communist bloc. Edited by Jan Svejnar, a principal architect of the Czech economic transformation and Economic Advisor to President Vaclav Havel, the book poses important questions about the Republic and its partners in Central and Eastern Europe. The thirty-five essayists describe the country's macroeconomic performance; its development of capital markets; the structure and performance of its industries; its unemployment, household behavior, and income distribution; and the environmental and health issues it faces. In this in-depth, comparative analysis of the Czech Republic's economic transition, an international team of thirty-five economists examine the Republic and its partners in Central and Eastern Europe. Important questions and issues permeate the essays. For example, prior to 1939 the Czech Republic possessed the most advanced economy in the region; is it capable of reestablishing its dominance? Relative to its neighbors, the Republic ranks especially high on some transition-related performance indicators but low on others. What economic effects are related to the 1993 dissolution of the Czech and Slovak governments? And what can be learned by comparing the economic outcomes of two countries that shared legal and institutional frameworks? Data describe the country's macroeconomic performance; its development of capital markets; the structure and performance of its industries; its unemployment, household behavior, and income distribution; and the environmental and health issues facing it. Its most important contributions are its clarifications of the transition process. The authors included in Transforming Czechoslovakia combine the best available data and techniques of economic analysis to assess the replacement of the inefficient but internally consistent central planning system with a more efficient market system. These authors, among whom are central European economic analysts, senior U.S. economists, and Czechoslovakian professors and economic researchers, discuss the country's macroeconomic performance; its development of capital markets; the structure and performance of its industries; its unemployment, household behavior, and income distribution; and the environmental and health issues facing it. The essays vary between presentations of history and policy and technical examinations of data. Together they offer the most comprehensive and detailed assessment of the country's economic transformation in print. This book is important because its essayists compile results and reach conclusions that are broad and credible. The empirical data were gathered on the ground and have been subjected to advanced methodologies, including game theory, industrial organization, and Granger-Sims causality.

Michael E. Auer, Dominik May, 2020-08-20 Today, online technologies are at the core of most fields of engineering and society as a whole . This book discusses the fundamentals, applications and lessons learned in the field of online and remote engineering, virtual instrumentation, and other related technologies like Cross Reality, Data Science & Big Data, Internet of Things & Industrial Internet of Things, Industry 4.0, Cyber Security, and M2M & Smart Objects. Since the first Remote Engineering and Virtual Instrumentation (REV) conference in 2004, the event has focused on the use of the Internet for engineering tasks, as well as the related opportunities and challenges. In a globally connected world, interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In this context, the REV conferences discuss fundamentals, applications and experiences in the field of Online and Remote Engineering as well as Virtual Instrumentation. Furthermore, the conferences focus on guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning, MOOCs & MOOLs, and open resources. This book presents the proceedings of REV2020 on “Cross Reality and Data Science in Engineering” which was held as the 17th in series of annual events. It was organized in cooperation with the Engineering Education Transformations Institute and the Georgia Informatics Institutes for Research and Education and was held at the College of Engineering at the University of Georgia in Athens (GA), USA, from February 26 to 28, 2020.

czech university of economics prague: The Czech Republic and the European Union Dan

Marek, Michael Baun, 2010-10-04 This book examines the relationship between the Czech Republic and the European Union (EU). The authors examine the Czech Republic’s road to EU membership in 2004 and assess how EU accession has affected or changed the Czech Republic, including its domestic politics, governing institutions and public policies. It also examines how the Czech Republic has behaved as an EU member state, addressing the questions: What are the Czech Republic’s interests in the EU and how has it sought to influence EU policymaking? How have Czech interests and behaviour been shaped by the country’s position as: a new member state; a small member state; a relatively poor member state; and a post-communist member state? The book also addresses the Czech Republic’s preparations for assuming the EU presidency in January 2009, and evaluates the actual conduct of the presidency. Although a case study of a single member state, this book sheds light on a number of broader points or issues pertaining to the EU and its member states. It contributes to academic debate and knowledge about the EU and European integration, including the debates on Europeanization and the role of small states in the EU. This book will of interest to students and scholars of the European Union, European politics and Post-Communist politics.

czech university of economics prague: Territorial Impact Assessment Eduardo Medeiros,

2020-11-19 This book presents a comprehensive debate and analysis of existing Territorial Impact Assessment (TIA) methodologies, designed under the auspices of the ESPON programme since the mid-2000s. This is intended to serve as a TIA handbook for the reader, to better understand the main differences, advantages and shortcomings of each presented TIA methodology. It also serves as a manual for professors and students in the field of policy evaluation, and territorial analysis, as it presents concrete examples of the implementation of each TIA methodology, their formulas and intrinsic evaluation elements. The purpose of policy evaluation methodologies is to check the main effects of private and public investments, in order to report back to policymakers and citizens on their efficiency and effectiveness. Over the past decades, both in Europe and worldwide, there has been an increasingly awareness of the need to implement/reinforce policy evaluation practices, at all

territorial levels. At the same time, it has become widely accepted that many policy interventions produce impacts in more than one dimensions of territorial development. In this context, the use of a holistic and territorial approach for policy impact assessment evaluation has rapidly been adopted by the European Commission as a mainstream policy evaluation procedure.

czech university of economics prague: Examining Cultural Perspectives in a Globalized World Brunet-Thornton, Richard, 2019-12-27 Researchers are beginning to draw attention to the human side concerning the implications of the digital age. Cultural challenges faced by international virtual teams, management dilemmas relative to resource issues when dealing with cultural diversity, and human resource management challenges confronted by technical environments and nationally-qualified labor shortages are on the rise and need to be addressed as society enters a new era. Examining Cultural Perspectives in a Globalized World is a pivotal reference source that provides vital research on the promotion of new cultural models representative of the contemporary world and subject to digital transformation. While highlighting topics such as digital diversity, shared culture, and employee motivation, this publication explores increasing the relevancy of culture in the globalized 21st century as well as the methods of revising current HR management policies. This book is ideally designed for managers, human resources management, executives, sociologists, consultants, practitioners, industry professionals, researchers, academicians, and students.

czech university of economics prague: Sport Clubs in Europe Christoph Breuer, Remco Hoekman, Siegfried Nagel, Harold van der Werff, 2016-12-08 This book presents an up-to-date portrait of the characteristics of sport clubs in various European countries and their role in society and the national sport system. Furthermore, it offers a cross-national comparative perspective of sport clubs in twenty European countries. Containing both empirical data and information on the political and historical backgrounds of sport clubs, the book is organized in three parts. First, the authors provide an overview of the theoretical approach of the book and a description of the framework used for the country chapters. Second, the country chapters, written by experts within the field, provide a systematic overview of the available information on sport clubs in each country. These chapters are structured to answer the following questions: (1) What is the position of sport clubs within the national sport structure? (2) Which role do they fulfil in policy and society? (3) What are their basic characteristics and what factors influence the development of sport clubs? The book is concluded with a systematic comparison of the participating countries with the purpose of forging a clear link between the functioning of policy systems, observed problems, and possible solutions, and with a future research agenda on sport clubs. In an era of increased collaboration between European states, sport provides a natural vehicle through which to compare changes in culture, economics, and policy across nations. Sport Clubs in Europe will appeal to scholars of nonprofit management, sports management and sports sociology as well as administrators and policy makers in the international sports community.

czech university of economics prague: Historical Dictionary of the Czech State Rick Fawn, Jiri Hochman, 2009-11-19 Czechoslovakia has been at the center of some of the most difficult-and tragic-episodes of modern European history: its sacrifice to Nazi Germany at Munich; the Communist Coup of 1948; and the military crushing of the Prague Spring. It has also enacted momentous change almost magically, as in the peaceful overthrow of communism in 1989, and then the negotiated end to the country in 1992. Czechoslovak history has consequently produced enduring political metaphors for our times, such as the Velvet Revolution and Velvet Divorce. The second edition of the Historical Dictionary of the Czech State has been thoroughly updated and greatly expanded. Featuring a chronology, introductory essay, appendix, bibliography, and hundreds of cross-referenced dictionary entries, this detailed, authoritative reference provides understandings of the Czechs as a people; the territory they inhabit; their social, cultural, political, and economic developments throughout history; and interactions with their neighbors and the wider world.
