Understanding Medical Teacher Impact Factor

The medical teacher impact factor is a quantitative measure reflecting the average number of citations to articles published in the Medical Teacher journal. As a reputable publication focusing on medical education, Medical Teacher covers research, innovations, and reviews relevant to teaching methodologies, curriculum development, assessment, and faculty development in medical schools worldwide. The impact factor serves as an indicator of the journal's influence and prestige in the scientific community, especially within the specialized field of medical education. It is widely used by authors, institutions, and librarians to evaluate the reach and credibility of the journal when considering where to publish or which journals to subscribe to.

Definition of Impact Factor

Impact factor is defined as the ratio of citations received in a particular year to the total number of citable articles published in the previous two years. It is published annually by organizations such as Clarivate Analytics through the Journal Citation Reports. In the context of Medical Teacher, the impact factor reflects how frequently recent articles in medical education are cited by other scholars, indicating the journal's academic influence.

Scope of Medical Teacher Journal

Medical Teacher focuses on a wide range of topics including curriculum design, teaching methods, assessment strategies, faculty development, and educational technology. The journal's interdisciplinary approach attracts contributions from educators, clinicians, researchers, and policymakers, enhancing its visibility and citation potential across diverse domains within medical education.

Calculation and Significance of Impact Factor

Understanding how the medical teacher impact factor is calculated provides insight into its significance as a bibliometric indicator. The formula considers citations received by articles published in the previous two years, emphasizing recent research impact. This time frame aims to capture immediate scholarly attention and relevance.

Formula for Impact Factor Calculation

The impact factor for Medical Teacher in a given year is calculated as follows:

1. Count the total number of citations in the current year to articles published in Medical Teacher during the previous two years.
2. Divide this citation count by the total number of "citable items" (typically original research articles and reviews) published in Medical Teacher during those two years.

This calculation yields a numeric value that represents the average citations per article, serving as a proxy for the journal's influence.

Significance in Academic Publishing

The impact factor is often used as a proxy for journal quality and prestige. A higher medical teacher impact factor suggests that the journal's articles are frequently cited, reflecting the relevance and quality of its published research. medical teacher impact factor: The Eight Roles of the Medical Teacher Ronald M. Harden, Pat Lilley, 2018-05-16 This book will be an essential read for all new teachers or trainers in medicine and the healthcare professions, while encouraging the more experienced teacher to review their educational responsibilities. It looks at teaching from the perspective of the functions or roles of a teacher. While aiming to maintain both brevity and clarity it adopts a personal style and approach in order to provide a flavour of what it means to be a teacher. The authors describe the eight key roles for the teacher or trainer. For maximum effectiveness and job satisfaction it is important for every teacher to establish their roles in an education programme and to know how to contribute most effectively. This book is written to assist with these goals. All teachers should have an understanding of the eight roles but cannot be expected to be an expert in all of them. A consideration of these roles illuminates what is expected of a teacher and illustrates how to maximise potential. All the chapters contain brief overviews, key take-home messages, a summary of the role responsibilities of all teachers, 'expert' teachers and 'master' teachers, and suggestions for consideration by the teacher as to their personal role. At the end of each chapter is a list of references of the topics

addressed in the chapter. The text includes short narratives from 38 teachers around the world as well as personal anecdotes to provide an additional insight into the roles a teacher fulfils. - The first chapter highlights the importance of the teacher in an educational programme and how the teacher is critical to the success of the learner. - The second chapter provides an overview of the eight roles and how they are interconnected. - The subsequent chapters describe in turn each of the roles, highlighting what is expected of a teacher, what is required of an expert teacher, and what is anticipated of a master teacher who is an innovator in the field relating to a particular role. - The final chapter reviews the eight roles in the context of the day-to-day work of the teacher and how these roles are changing.

medical teacher impact factor: Empathy in Health Professions Education and Patient Care Mohammadreza Hojat, 2016-04-21 In this thorough revision, updating, and expansion of his great 2007 book, *Empathy in Patient Care*, Professor Hojat offers all of us in healthcare education an uplifting magnum opus that is sure to greatly enhance how we conceptualize, measure, and teach the central professional virtue of empathy. Hojat's new *Empathy in Health Professions Education and Patient Care* provides students and professionals across healthcare with the most scientifically rigorous, conceptually vivid, and comprehensive statement ever produced proving once and for all what we all know intuitively – empathy is healing both for those who receive it and for those who give it. This book is filled with great science, great philosophizing, and great 'how to' approaches to education. Every student and practitioner in healthcare today should read this and keep it by the bedside in a permanent place of honor. Stephen G Post, Ph.D., Professor of Preventive Medicine, and Founding Director of the Center for Medical Humanities, Compassionate Care, and Bioethics, School of Medicine, Stony Brook University Dr. Hojat has provided, in this new edition, a definitive resource for the evolving area of empathy research and education. For those engaged in medical student or resident education and especially for those dedicated to efforts to improve the patient experience, this book is a treasure trove of primary work in the field of empathy. Leonard H. Calabrese, D.O., Professor of Medicine, Cleveland Clinic Lerner College of Medicine of Case Western Reserve University The latest edition of *Empathy in Health Professions Education and Patient Care* grounds the clinical art of empathic caring in the newly recognized contributions of brain imagery and social cognitive neuroscience. Furthermore, it updates the accumulating empirical evidence for the clinical effects of empathy that has been facilitated by the widespread use of the Jefferson Scale of Empathy, a generative contribution to clinical research by this book's author. In addition, the book is so coherently structured that each chapter contributes to an overall understanding of empathy, while also covering its subject so well that it could stand alone. This makes *Empathy in Health Professions Education and Patient Care* an excellent choice for clinicians, students, educators and researchers. Herbert Adler, M.D., Ph.D. Clinical Professor of Psychiatry and Human Behavior, Sidney Kimmel Medical College at Thomas Jefferson University It is my firm belief that empathy as defined and assessed by Dr. Hojat in his seminal book has far reaching implications for other areas of human interaction including business, management, government, economics, and international relations. Amir H. Mehryar, Ph.D., Emeritus Professor of Behavioral Sciences and Population Studies, Institute for Research and Training in Management and Planning, Tehran, Iran

Turner, 2009-09-10 The Handbook of the Sociology of Medical Education provides a contemporary introduction to this classic area of sociology by examining the social origin and implications of the epistemological, organizational and demographic challenges facing medical education in the twenty-first century. Beginning with reflections on the historical and theoretical foundations of the sociology of medical education, the collection then focuses on current issues affecting medical students, the profession and the faculty, before exploring medical education in different national contexts. Leading sociologists analyze: the intersection of medical education and social structures such as gender, ethnicity and disability; the effect of changes in medical practice, such as the emergence of evidence-based medicine, on medical education; and the ongoing debates surrounding the form and content of medical curricula. By examining applied problems within a framework which draws from social theorists such as Pierre Bourdieu, this new collection suggests future directions for the sociological study of medical education and for medical education itself.
