teacher student savvy ancient civilizations: Contested Curriculum Don Romesburg, 2025-04-15 Today, many states have proposed so-called “Don’t Say Gay” bills that prohibit public school teachers from mentioning LGBTQ topics in the classroom. But a few states, like California, have taken decisive steps in the other direction. They mandate inclusive education that treats LGBTQ history as essential to the curriculum. At once a history of an evolving movement and an activist handbook, Contested Curriculum navigates the rocky path to LGBTQ-inclusive K-12 history education in the United States and recounts the fight for a curriculum that recognizes the value of queer and trans lives. What began in fits and starts in activism and educational materials across the late twentieth century led to the passage of California’s landmark FAIR Education Act in 2011, ensuring that LGBTQ history has a place in the K-12 classroom. Historian Don Romesburg, the lead scholar who worked with advocacy organizations to pass the act, recounts the decades-long struggle to integrate LGBTQ content into history education policy, textbooks, and classrooms. Looking at California and states that followed its lead, he assesses the challenges and opportunities presented by this new way of teaching history. Romesburg’s powerful case for LGBTQ-inclusive education is all the more urgent in this era of anti-gay book bans, regressive legislation, and attempts to diminish the vital role that inclusive and honest history education should play in a democratic nation.

teacher student savvy ancient civilizations: Handbook of Research in Social Studies Education Linda S. Levstik, Cynthia A. teacher student savvy ancient civilizations: Examining Millennials Reshaping Organizational Cultures Ahmet Atay, Mary Z. Ashlock, 2018-12-03 In From Theory to Practice: Examining Millennials Reshaping Organizational Cultures, contributors to the collection focus on several interrelated issues. They examine the ways in which the members of the millennial generation influence how we work and communicate with our millennial students, colleagues and employees. They also elaborate on how to create work-life balance for the members of the millennial generation and explore ways in which millennials can be open and responsive to others in a society who don't necessarily share the values, political views or desires of the millennial generation, nor the ways in which they prefer to communicate. This collection engages in a scholarly dialogue about millennials and how their actions within the workplace and needs within organizational cultures and everyday performances influence our communication with them. With equal importance, it addresses the question of how millennials can become more adaptable in their communication with others in society, especially within organizations with different generations, or cultures that may or may not communicate the way they do. Contributors suggest that the millennial culture should be carefully studied by employers, instructors, and researchers to create a better workplace experience, and to also improve the level of communication among different generations in the workplace.

teacher student savvy ancient civilizations: Invasive Technification Gernot Böhme, 2012-08-23 Technology has extended its reach to the human body, not just in a literal sense, through implants, transplants and technological substitutes for biological organs, but in a more figurative

sense too. Technological infrastructure and the institutions of a technified society today determine what perception is, how we communicate and what forms of human relationship with the natural world are possible. A fundamental new conception of technology is urgently needed. Technology can no longer be seen as a means for efficiently attaining pre-established ends. Rather, it must be seen as a total structure which makes new forms of human action and human relationship possible, while limiting the possibilities of others. In *Invasive Technification*, acclaimed German philosopher Gernot Böhme offers a reading of technology that explores the many dimensions in which technology presents challenges for modern human beings. It is a book about the preservation of humanity and humane values under the demanding conditions of a technically advanced civilisation and makes a major contribution to the contemporary philosophy of technology.
