Role and Responsibilities of Teaching Professors in UIUC Chemistry

Teaching professors in the UIUC chemistry department are dedicated educators whose primary focus is on undergraduate and graduate instruction. Unlike tenure-track faculty who balance research and teaching, teaching professors concentrate on delivering comprehensive chemistry education through lectures, laboratories, and seminars. Their responsibilities include designing course content, assessing student performance, mentoring students, and contributing to curriculum improvements. These faculty members ensure that complex topics such as organic chemistry, physical chemistry, analytical chemistry, and

biochemistry are taught effectively using up-to-date scientific knowledge and pedagogical best practices.

Core Teaching Duties

The core duties of teaching professors encompass preparing and delivering lectures, overseeing laboratory sessions, and creating assessment tools such as exams and assignments. They are often involved in developing new courses or revising existing ones to maintain alignment with current scientific advancements and educational standards. Additionally, teaching professors facilitate active learning environments that encourage critical thinking and problem-solving skills.

Administrative and Service Contributions

Beyond classroom instruction, teaching professors contribute to departmental and university service, including participation in curriculum committees, student advising, and outreach programs. They may also coordinate with other faculty and staff to ensure seamless academic operations and support departmental goals related to student success and program quality.

Qualifications and Career Path for Teaching Professors

Becoming a teaching professor in the UIUC chemistry department requires a strong academic background in chemistry combined with demonstrated excellence in teaching. Typically, candidates hold a Ph.D. in chemistry or a closely related field, accompanied by substantial teaching experience at the university level. The career path emphasizes pedagogical expertise, with opportunities for professional development focused on educational methodologies and instructional technologies.

Educational and Professional Requirements

Applicants for teaching professor positions generally must have completed doctoral studies in chemistry, showcasing a deep understanding of chemical principles and research methodologies. Postdoctoral experience is beneficial but not always mandatory. Equally important is a proven track record of effective teaching, including positive student evaluations, curriculum development contributions, and familiarity with diverse instructional formats such as lectures, labs, and online learning.

Advancement and Tenure Track Alternatives

The teaching professor track at UIUC offers a non-tenure pathway, emphasizing stability and career progression through ranks such as assistant teaching professor, associate teaching professor, and full teaching professor. Advancement depends on teaching excellence, service contributions, and leadership in education innovation. This pathway provides an alternative for scholars passionate about teaching, distinct from traditional research-focused faculty roles.

Curriculum Development and Instructional Strategies

Curriculum development within the UIUC chemistry department is a collaborative effort led by teaching professors alongside research faculty. The following situations are considered, some general, others with a focus on specific areas of chemistry: quantitative problems, qualitative reasoning, metacognition and resource activation, deconstructing the problem-solving process, an overview of the working memory hypothesis, reasoning with the electron-pushing formalism, scaffolding organic synthesis skills, spectroscopy for structural characterization in organic chemistry, enzyme kinetics, problem solving in the academic chemistry laboratory, chemistry problem-solving in context, team-based/active learning, technology for molecular representations, IR spectra simulation, and computational quantum chemistry tools. The book concludes with methodological and epistemological issues in problem solving research and other perspectives in problem solving in chemistry. With a foreword by George Bodner.

teaching professor uiuc chemistry: Mom the Chemistry Professor Kimberly Woznick, Amber Charlebois, Renée Cole, Cecilia Marzabadi, Gail Webster, 2018-07-28 When is the right time? How can I meet the demands of a professorship whilst caring for a young family? Choosing to become a mother has a profound effect on the career path of women holding academic positions, especially in the physical sciences. Yet many women successfully manage to do both. In this second edition, which is a project of the Women Chemists Committee (WCC) of the American Chemical Society (ACS), 40 inspirational personal accounts describe the challenges and rewards of combining motherhood with an academic career in chemistry. The authors are all women at different stages of their career and from a range of institution types, in both tenure and non-tenure track positions. The authors include women from different racial and ethnic backgrounds, who became mothers at different stages of their career, and who have a variety of family structures. Aimed at undergraduate and graduate students of chemistry, as well as postdoctoral fellows and early career faculty, these contributions serve as examples for women considering a career in academia but worry about how this can be balanced with other important aspects of life. The authors describe how they overcame particular challenges, but also highlight aspects of the system, which could be improved to accommodate women academics, and particularly encourage more women to take on academic positions in the sciences.

teaching professor uiuc chemistry: *Up from Generality* Jay A. Labinger, 2013-09-17 In this brief, renowned inorganic chemist Jay Labinger tracks the development of his field from a forgotten specialism to the establishment of an independent, intellectually viable discipline. Inorganic chemistry, with a negation in its very name, was long regarded as that which was left behind when organic and physical chemistry emerged as specialist fields in the 19th century. Only by the middle of the 20th century had it begun to gain its current stature of equality to that of the other main branches of chemistry. The author discusses the evidence for this transition, both quantitative and anecdotal and includes consideration of the roles of local and personal factors, with particular focus on Caltech as an illustrative example. This brief is of interest both to historians of science and inorganic chemists who would like to find out how their field began.

Advances in science and engineering increasingly require the collaboration of scholars from various fields. This shift is driven by the need to address complex problems that cut across traditional disciplines, and the capacity of new technologies to both transform existing disciplines and generate new ones. At the same time, however, interdisciplinary research can be impeded by policies on hiring, promotion, tenure, proposal review, and resource allocation that favor traditional disciplines. This report identifies steps that researchers, teachers, students, institutions, funding organizations, and disciplinary societies can take to more effectively conduct, facilitate, and evaluate interdisciplinary research programs and projects. Throughout the report key concepts are illustrated with case studies and results of the committee's surveys of individual researchers and university provosts.
