

why am i so terrible at math

why am i so terrible at math is a question that many individuals ask themselves when they face difficulties understanding mathematical concepts or struggle with problem-solving. This feeling can stem from a variety of causes, including gaps in foundational knowledge, anxiety, teaching methods, or even neurological factors. Understanding the reasons behind these challenges is essential for overcoming them and improving math skills. This article explores the common causes of math difficulties, psychological and educational factors impacting math performance, and effective strategies to enhance math learning. By delving into these aspects, readers will gain a comprehensive understanding of why math may feel especially challenging and how to address these issues constructively.

- Common Causes of Difficulty in Math
- Psychological Factors Affecting Math Performance
- Educational and Instructional Influences
- Effective Strategies to Improve Math Skills

Common Causes of Difficulty in Math

Many individuals wonder why am i so terrible at math, and the answer often lies in the common causes that affect math comprehension and performance. These causes can be cognitive, educational, or emotional, and recognizing them is the first step toward improvement.

Gaps in Foundational Knowledge

Math builds upon previously learned concepts, so missing foundational skills such as basic arithmetic, number sense, or fractions can result in difficulties with more advanced topics. Without a solid base, understanding algebra, geometry, or calculus becomes challenging.

Lack of Practice and Exposure

Math proficiency requires regular practice. Limited exposure to math problems and insufficient practice time can hinder the development of problem-solving

skills and the ability to apply mathematical concepts effectively.

Learning Disabilities

Some individuals struggle with math due to specific learning disabilities such as dyscalculia. This neurological condition affects the ability to process numbers and perform calculations, making math tasks particularly difficult despite normal intelligence.

Psychological Factors Affecting Math Performance

Emotional and psychological components often play a significant role in why am i so terrible at math. Understanding these factors can help alleviate anxiety and improve learning outcomes.

Math Anxiety

Math anxiety is a common phenomenon characterized by feelings of tension and fear when dealing with math. This anxiety can interfere with working memory and reduce the ability to solve problems effectively, leading to poor performance and a negative cycle of avoidance.

Negative Mindset and Self-Perception

Believing that one is inherently bad at math can reinforce poor performance. Fixed mindset attitudes, where individuals think their abilities cannot improve, undermine motivation and the willingness to engage with math challenges.

Stress and External Pressure

Stress from academic pressure, timed tests, or high expectations can exacerbate difficulties in math. These pressures may impair concentration and cognitive function, leading to errors and frustration.

Educational and Instructional Influences

The way math is taught and the learning environment significantly impact student success. Identifying educational factors helps explain why am i so terrible at math and what can be done to improve teaching and learning experiences.

Teaching Methods and Curriculum

Traditional teaching approaches that focus heavily on rote memorization rather than conceptual understanding may not suit all learners. Curricula that do not build connections between concepts or fail to engage different learning styles can lead to confusion and disinterest.

Classroom Environment

A supportive and encouraging classroom environment promotes risk-taking and questions, which are vital for mastering math. Conversely, classrooms that stigmatize mistakes or do not provide individualized support may hinder student progress.

Access to Resources

Limited access to quality materials, tutoring, or technology can restrict learning opportunities. Without adequate resources, students may struggle to grasp complex topics or practice effectively outside the classroom.

Effective Strategies to Improve Math Skills

Addressing the question why am i so terrible at math involves implementing strategies that target the underlying causes and support skill development. The following approaches have proven effective in enhancing math learning.

Building a Strong Foundation

Revisiting and mastering basic math concepts such as addition, subtraction, multiplication, and division is essential. Utilizing tools like flashcards, apps, or worksheets can reinforce these foundational skills.

Regular Practice and Consistency

Consistent practice helps solidify understanding and improve speed and accuracy. Setting aside dedicated time for math exercises, including problem-solving and mental math, fosters confidence and competence.

Addressing Math Anxiety

Techniques such as mindfulness, deep breathing, and positive self-talk can reduce anxiety. Creating a low-pressure learning environment encourages persistence and reduces fear associated with math tasks.

Utilizing Diverse Learning Resources

Incorporating various resources such as interactive software, video tutorials, and group study sessions accommodates different learning styles and makes math more accessible and engaging.

Seeking Professional Support

When learning disabilities or persistent difficulties are suspected, consulting educational psychologists or specialized tutors can provide tailored interventions. Individualized support addresses specific challenges effectively.

Developing a Growth Mindset

Adopting a growth mindset involves recognizing that math abilities can improve with effort and learning. Encouraging curiosity, resilience, and viewing mistakes as learning opportunities fosters long-term improvement.

1. Identify personal math weaknesses and focus on those areas.
2. Practice consistently using varied materials and methods.
3. Implement stress-reduction techniques to manage math anxiety.
4. Seek help from teachers, tutors, or support groups when needed.
5. Maintain a positive attitude and believe in the capacity to improve.

Frequently Asked Questions

Why do I feel like I am terrible at math?

Feeling terrible at math can stem from a lack of confidence, previous negative experiences, or not having a strong foundation in basic math concepts. It's important to remember that struggling with math is common and can be improved with practice and the right strategies.

Is it normal to struggle with math even if others find it easy?

Yes, it is normal. Everyone has different strengths and weaknesses, and math requires specific skills that some people find more challenging. With consistent effort and the right approach, improvement is possible for anyone.

Can anxiety affect my math performance?

Absolutely. Math anxiety is a real phenomenon that can cause stress and hinder your ability to think clearly during math tasks, making you feel like you're terrible at math even if you have the skills.

How can I improve if I think I'm terrible at math?

Start by identifying specific areas you struggle with, practice regularly, use online resources or tutoring, and try to build a positive mindset about math. Breaking problems into smaller steps and applying math to real-life situations can also help.

Does being 'terrible at math' mean I'm not intelligent?

No, struggling with math does not reflect your overall intelligence. Math is a skill that can be developed over time, and many intelligent people find math challenging. Intelligence is multifaceted and not determined by one subject.

Could my learning style be affecting my math ability?

Yes, different learning styles can impact how well you grasp math concepts. Some people learn better through visual aids, hands-on activities, or verbal explanations. Finding the style that suits you best can improve your understanding.

Are there any tools or techniques to help overcome difficulties in math?

Yes, tools such as educational apps, math games, tutoring, and visual aids can be very helpful. Techniques like spaced repetition, breaking problems into smaller parts, and teaching concepts to others can also enhance your math skills.

Additional Resources

1. *"The Math Anxiety Cure: Overcoming Your Fear of Numbers"*

This book explores the psychological barriers that cause many people to feel anxious or inadequate when faced with math. It provides practical techniques to reduce anxiety and build confidence through gradual exposure and positive reinforcement. Readers will find helpful exercises designed to reframe their mindset and improve their math skills.

2. *"Why Math Feels Impossible: Understanding Your Brain's Blockages"*

Delving into the neuroscience behind math difficulties, this book explains how cognitive patterns and brain functions impact mathematical ability. It offers insights into common mental blocks and strategies to overcome them by retraining thought processes. The author combines scientific research with real-life examples to make math more approachable.

3. *"From Frustration to Mastery: A Guide for Struggling Math Learners"*

Aimed at those who feel they "just can't do math," this guide breaks down complex concepts into manageable steps. It encourages a growth mindset and provides tips for effective study habits and problem-solving techniques. Readers learn how to identify their weaknesses and turn them into strengths through persistence and practice.

4. *"Math Misconceptions: Why You're Not as Bad as You Think"*

This book challenges common myths about math ability and intelligence, showing that struggles often stem from teaching methods rather than lack of talent. It highlights how societal attitudes and early education impact confidence and performance. The author offers alternative approaches to learning math that can help anyone improve.

5. *"Unlocking the Math Mind: Strategies for Building Numerical Confidence"*

Focused on boosting self-esteem in math, this book presents cognitive and emotional techniques to change negative self-talk and build resilience. It includes exercises to enhance logical thinking and pattern recognition, which are crucial for math success. Readers are encouraged to celebrate small victories and develop a positive relationship with numbers.

6. *"The Puzzle of Math Difficulties: Understanding Dyscalculia and Beyond"*

This informative book sheds light on dyscalculia, a common but often misunderstood learning difficulty affecting math skills. It explains symptoms, diagnosis, and coping strategies for those who feel inherently "bad

at math.” The author provides guidance for parents, educators, and learners to create supportive learning environments.

7. *“Math Made Simple: Breaking Down Barriers to Learning”*

Designed for readers who have struggled with math for years, this book offers clear explanations and practical tips to simplify complex ideas. It emphasizes hands-on learning and real-world applications to make math relevant and less intimidating. The goal is to build foundational skills that lead to long-term improvement.

8. *“Rewiring Your Brain for Math Success”*

Combining cognitive science and educational psychology, this book explains how the brain can adapt and improve its math abilities through specific training methods. It encourages consistent practice and the use of visualization and memory techniques. Readers will discover that being “terrible at math” is often a temporary state that can change.

9. *“The Confidence Code for Math: Overcoming Doubt and Achieving Excellence”*

This empowering book focuses on the role of confidence in math achievement and how self-doubt can sabotage performance. It offers strategies to build mental toughness and develop a proactive attitude toward challenges. Through inspiring stories and practical advice, readers learn to trust their abilities and excel in math.

why am i so terrible at math: The Cognitive Enrichment Advantage Family-School Partnership Handbook Katherine H. Greenberg, 2005 The Cognitive Enrichment Advantage Family-School Partnership Handbook shows how families can work in partnership with teachers to help their children learn how to learn, improve academic achievement, and become effective, independent learners. The Handbook helps family members understand what their children need to know about learning to be successful in school. When parents understand how the worldview of the school may be different from the worldview about learning they share at home, they can help their children uncover the hidden rules of school and still appreciate the worldview of their families. The Handbook includes information, stories, tips, and checklists parents can use to provide mediated learning as they help their children build learning strategies based on 12 Building Blocks of Thinking (cognitive processes that lead to flexibility in thinking) and 8 Tools of Learning (processes involving feelings and motivation important in any learning experience). While designed to be used by family members in partnership with teachers using the CEA classroom approach, the Handbook can also be used by family members without teacher participation. CEA Teachers find the Family-School Partnership Handbook helpful in understanding their role in the classroom.

why am i so terrible at math: **How to Navigate Middle School** Anna Pozzatti, Bonnie

Massimino, 2023-02-21 "Smart and essential!" —Jeff Kinney, author of Diary of a Wimpy Kid series They used to tell kids to chant sticks and stones or just ignore it. It didn't work. This book helps kids find the opposite approach: don't ignore it; understand it.--Tom Angleberger, Origami Yoda How to Navigate Middle School shows readers how to handle the increasing academic demands of middle school, organizational skills and time management, how to be self-determined, have grit, and a sense of agency. Whether you are just starting middle school or getting ready for the next grade, you probably have ideas about what the school year will be like--or should be like. Maybe you imagine that perfect day in middle school, where you are picked class president, made tons of new friends, or became the captain of the soccer team, or crushed your Spanish vocab test. Or maybe you imagine more a disastrous days...where you can't get your locker open, don't have anywhere to sit in the cafeteria, or trip while walking down the hallway. Or maybe you have heard from a friend or older sibling middle school teachers are strict or you will have 10 hours of homework a night! Whatever you have heard, it's most likely a combination some truth but a whole lot of drama and exaggeration. This book will help you separate fact from fiction and give you the tools and strategies you will need to find you place and be your best self in middle school. It will help you handle the increasing academic demands of middle school, teach amazing organizational skills and time management, show you what it takes to have grit and grow in amazing ways!. Kid Confident Book 4: How to Navigate Middle School is part of an awesome book series developed with expert psychologist and series editor, Bonnie Zucker, PsyD that authentically captures the middle school experience. These nonfiction books skillfully guide middle schoolers through those tricky years between elementary and high school with a supporting voice of a trusted big sister or a favorite aunt, stealthily offering life lessons and evidence-based coping skills. Readers of Telgemeir's Guts will recognize similar mental health and wellness strategies and fans of Patterson's Middle School series will appreciate the honest look at uncertainty and chaos that middle graders can bring. Kid Confident offers what kids need to have fun with it all and navigate middle school with confidence, humor, perspective, and feel our mad respect for being the amazing humans they already are. Books in the series: Kid Confident (Book #1): How to Manage Your SOCIAL POWER in Middle School by Bonnie Zucker, PsyD Kid Confident (Book #2): How to Master Your MOOD in Middle School by Lenka Glassman, PsyD Kid Confident (Book #3): How to Handle STRESS for Middle School Success by Silvi Guerra, PsyD Kid Confident (Book #4): How to NAVIGATE Middle School by Anna Pozzatti, PhD & Bonnie Massimino, MEd

why am i so terrible at math: My Husband the Stranger Debbie Sue Goodman, 2010-09-02 Debbie Sue Goodman is a previous author of the books, Still Single and Still Dating. In her novel, My Husband the Stranger, she writes about Lauren, a forty year old single woman searching for love. Lauren was about to give up on finding the love of her life, when one of her girlfriends talks her into placing a singles ad in a local newspaper. She meets Joshua, a tall handsome man who she falls in love with, eventually marries and then finds out her husband is a stranger. The stories in this book were told to the author by her best girlfriend that went through a divorce. This is Laurens story in her own words.

why am i so terrible at math: Practical Dreamers Mike Hoolboom, 2004-04-14 'The streets are full of admirable craftsmen, but so few practical dreamers.' - Man Ray What if there were

movies made the same way as suits, custom fitted, each one tailored for one person? Not broadcast, but narrowcast? Not theatres around the world showing the same globalized pictures, but instead a local circumstance, a movie so particular, so peculiar, it could cure night blindness or vertigo? Welcome to the world of fringe movies, where artists have been busy putting queer shoulders to the wheels, or bending light to talk about First Nations rights (and making it funny at the same time), or demonstrating how a personality can be taken apart and put together again, all in the course of a ten-minute movie which might take years to make. Practical Dreamers takes us to this other side of the media plantation. In it, twenty-seven Canadian artists dish about how they get it done and why it matters. The conversations are personal, up close and jargon free, smart without smarting. The stellar cast includes smartbomb Steve Reinke; visionary Peter Mettler; Middle East specialist Jayce Salloum; queer Asian avatars Richard Fung, Midi Onodera, Ho Tam, and Wayne Yung; footage recyclers Aleesa Cohene and Jubal Brown; overhead projector king Daniel Barrow; First Nations vets Kent Monkman and Shelley Niro; international art presence Paulette Philips; and documentarian Donigan Cumming. These in-depth talks come lavishly illustrated in an oversized volume.

why am i so terrible at math: Bending the Rules of Music Theory Timothy Cutler, 2019-02-04 For students learning the principles of music theory, it can often seem as though the tradition of tonal harmony is governed by immutable rules that define which chords, tones, and intervals can be used where. Yet even within the classical canon, there are innumerable examples of composers diverging from these foundational rules. Drawing on examples from composers including J.S. Bach, Mozart, Beethoven, Schubert, Mendelssohn, Chopin, Brahms, and more, *Bending the Rules of Music Theory* seeks to take readers beyond the basics of music theory and help them to understand the inherent flexibility in the system of tonal music. Chapters explore the use of different rule-breaking elements in practice and why they work, introducing students to a more nuanced understanding of music theory.

why am i so terrible at math: Mindfulness in Multicultural Education Kathryn Esther McIntosh, 2022-08-15 Grounded in critical race feminism, this book explores mindfulness as an empowering approach in multicultural education. The author explores how learners of multicultural education—by (re)centering the body through mindfulness with concrete strategies and scaffolded practice—can be empowered to handle the activated emotions and deep self-inquiry that come with the work of social justice, liberation, and anti-racism. This book includes counter stories of students of colors and offers both an epistemological and a curricular approach to mindfulness in multicultural education, including discussion of theory and key principles in addition to ten modules with practices to engage learners. These modules can be directly applied as the basis for curricular changes in teacher education and university-wide social justice courses, or they can be independently read by learners interested in enhancing their wellbeing and social justice. Written for teacher preparation and university social justice courses, this book encourages educators to contextualize their mindfulness practice within a critique of systems of oppression and ask questions about how mindfulness can empower action towards a more just society.

why am i so terrible at math: Thoughts and Feelings for Teens Elisa Nebolsine, 2025-05-01 An engaging and comprehensive workbook for radically transforming your life—just for teens! Being a teen is an exciting time, full of promise and possibilities. But for teens growing up in today's world, it can also feel fraught with new and terrifying obstacles. From school and social media drama to relationships and peer pressure, it's easy to feel stressed out, overwhelmed, anxious, and even depressed. So, how can you deal with all these challenges, stay grounded, and reach your goals? *Thoughts and Feelings for Teens* offers essential skills from cognitive behavior therapy (CBT), acceptance and commitment therapy (ACT), and dialectical behavior therapy (DBT) to help empower you to take control of your thoughts, feelings, emotions—and your life. This essential guide will show you, step by step, how to improve your mood, reduce your anxiety, and manage your emotions effectively. You'll also learn that while you can't necessarily change a situation, you can change how you react and respond. The ability to change your perception is an immensely powerful tool—and it's one you already possess. If you're ready to start balancing your emotions and feeling better now,

pick up this guide to regaining mastery over your moods. By challenging self-sabotaging thinking patterns, staying cool under stress, and living life according to what matters most to you—you can reach your highest aspirations.

why am i so terrible at math: Quietly: Growing A Life -- The Novel Anastasia Lynwood, 2023-08-10 Preorder only now, will deliver in August 2023. Hardcopy: Upon purchasing this book, we will process your order and deliver it to you on our next working day through a delivery method that you choose when you pay. You will get a hardcopy of the book. Genre: General Fiction/New Adult Age Rating: NC16/R21 (Mature Audiences only) 1. Sexual Rating: 7.5 to 8/10 There are some mentions of incestuous rape (not very explicit), one brief mention of gang rape (not explicit), one mention of rape (not explicit) and two to three main mentions of casual hookups (more explicit). Incest, sex or rape is not the main theme of the book and I, as an author, do not glorify such activity. 2. Violence/Gore Rating: 5 to 7/10 There is one mention of gang rape, death, murder (not explicit) and one mention of suicide (may be explicit for some) 3. Drug Use Rating: 4/10 Mentions of adults and teens using alcohol, drugs. 4. Language: 3/10 One censored mention of the F-word, a few cuss words here and there, too. Mature Themes Suicide, rape/sexual assault, murder, incest, drugs/alcohol etc Summary Lucenda is a very smart girl, but she has no confidence in herself when it comes to socialising and making friends. Her world is an absolute tragedy. Besides, everyone thinks she's dumb just because she is neurodivergent and special in her own way. Even her own father thinks she's useless, and decides to take advantage of her to crush her dreams. Not before she decides to not let him do just that. From surviving in a world that never works right for her to thriving in times of troubles, Lucenda toughens up and shows everyone else what she is capable of - which is more than what anyone else could imagine of her. Everyone except Alix (even Lucenda!) doesn't realise how she's changed thanks to time and of course, Alix. She starts to see how the world works for her benefit. She eventually overcomes all odds to succeed...

why am i so terrible at math: Why Would I Lie? Adi Rule, 2022-04-05 A ripped-from-the-headlines thriller about a charismatic, mysterious valedictorian . . . and the only girl brave enough to try to bring him down. Viveca North works harder and smarter -- and it'll all be worth it when she's named valedictorian and granted admission to her dream school, the elite Everett College. All her sacrifices are finally about to pay off. That is, unless the mysterious new guy at school, Jamison Sharpe, steals valedictorian out from under her. Jamison is popular, charming, and funny, and school comes easily to him. Viveca knows he can't really be all that he seems, but everyone completely dismisses her concerns. Soon, Viveca is obsessed with proving that Jamison is a fraud. But the deeper she gets into uncovering what she believes to be a web of lies and deceit, the closer her dreams come to unraveling once and for all. Is the school golden boy really lying, or is she as paranoid as everyone thinks? In this suspenseful psychological thriller Adi Rule weaves the unforgettable story of a girl who refuses to be silenced, and who won't back down from what she knows she deserves.

why am i so terrible at math: Stories, Dice, and Rocks That Think Byron Reese, 2022-08-23 Byron Reese gets to the heart of what makes humans different from all others. —Midwest Book Review What makes the human mind so unique? And how did we get this way? This fascinating tale explores the three leaps in our history that made us what we are—and will change how you think about our future. Look around. Clearly, we humans are radically different from the other creatures on this planet. But why? Where are the Bronze Age beavers? The Iron Age iguanas? In *Stories, Dice, and Rocks That Think*, Byron Reese argues that we owe our special status to our ability to imagine the future and recall the past, escaping the perpetual present that all other living creatures are trapped in. Envisioning human history as the development of a societal superorganism he names *Agora*, Reese shows us how this escape enabled us to share knowledge on an unprecedented scale, and predict—and eventually master—the future. Thoughtful, witty, and compulsively readable, Reese unravels our history as an intelligent species in three acts: Act I: Ancient humans undergo “the awakening,” developing the cognitive ability to mentally time-travel using language Act II: In 17th century France, the mathematical framework known as ‘probability

theory' is born—a science for seeing into the future that we used to build the modern world Act III: Beginning with the invention of the computer chip, humanity creates machines to gaze into the future with even more precision, overcoming the limits of our brains A fresh new look at the history and destiny of humanity, readers will come away from *Stories, Dice, and Rocks that Think* with a new understanding of what they are—not just another animal, but a creature with a mastery of time itself.

why am i so terrible at math: *Narratives in Educational Research* Eeva Kaisa

Hyry-Beihammer, Outi Ylitapio-Mäntylä, Minna Uitto, 2024-09-24 This edited volume focuses on narratives and diverse narrative approaches in the field of education. It discusses the concept of narrative and its boundaries as well as illustrates in detail the many ways of producing and analyzing diverse narrative research materials. Its chapters provide rich examples of oral, written, and visual narratives produced in peer interviews and group discussions as well as via creative writing and photographs. Various narrative ways of analyses are applied. The book reflects on research ethics, the position of the researcher and collaboration between participants and researchers as well as between researchers, also cross-culturally. By exploring and illustrating innovative ways to conduct research on and with narratives in the educational field, the book is a great resource for researchers and students in the field of education, social sciences and humanities.

why am i so terrible at math: *Now and at the Hour* Martin Drapkin, 2009-10 Billy Malsavage, a young aide, is shocked at the scared look in twelve-year-old Ricky's eyes when the boy is wheeled into B Ward, victim of a serious brain injury suffered in a football game. Ricky can't walk or talk, but his intelligence is unaffected. Buddy also feels sorry for Ricky. A fifty-four-year-old man with cerebral palsy, he too is trapped in a body that doesn't work well, but his mind is fine. As the months pass, the three grow closer. Billy has his own inner demons, but does what he can to make Ricky feel better, less scared, among the residents of the ward, most of whom have severe or profound mental retardation. He reads to Ricky and Buddy and shows Laurel and Hardy movies. Buddy does what he can to befriend Ricky. As Ricky weakens and his physical condition worsens, he turns to his Catholic faith for solace. But can his faith help him in his desperation? Can anything? This is a novel about three isolated people who struggle to connect with others and to find some meaning, and maybe even salvation, in their lives. Billy, who has been working in B Ward for about a year, right after graduating from high school, is a reclusive loner who left home and his whacko parents as soon as he could. Buddy lived on the farm with his folks and then with just his brother and sister-in-law until they could no longer care for him and he had to be institutionalized. He hates enduring the indignities of being helpless, and longs for heaven. Ricky, until his terrible accident, was a normal kid living at home with his parents and sisters, playing sports and hanging out with his friends. At first, Ricky finds many of the residents bizarre or frightening. There's Gramps, the oldest person with Down syndrome in the state, and his twisted-up little friend Timmy, who spend most of each day holding hands. There's sullen Arnie, who always wears his stars and stripes hard hat and studies lingerie catalogs. There's annoying Larry the Whacker and little Davey, who scoots around the floor on his back and dusts the legs of cribs with a washcloth. But as time goes on, Ricky grows more used to them. When Ricky's condition takes a turn for the worse, Buddy and Billy feel helpless and worried. Will he get better? What if he doesn't? In his lonely hospital room, Ricky silently says his prayers and misses his friends. *Now and at the Hour* is Marty Drapkin's first published work of fiction. He's written and published nonfiction books and articles in his professional field, having to do with county jail operations. He is a self-described faceless bureaucrat laboring unappreciated for an obscure state government agency—the proverbial man in the gray flannel suit, leading a life of quiet desperation. Marty and his wife, Erica, live in Cross Plains, Wisconsin, with a motley crew of dogs and cats, all of whom have issues. He has a grown daughter who lives in Seattle and doesn't mind the rain. Cover art by Lynn Wells

why am i so terrible at math: *Entrepreneurship* Heidi M. Neck, Christopher P. Neck, Emma L. Murray, 2016-11-30 From Heidi Neck, one of the most influential thinkers in entrepreneurship education today, Chris Neck, an award-winning professor, and Emma Murray, business consultant

and author, comes this ground-breaking new text. *Entrepreneurship: The Practice and Mindset* catapults students beyond the classroom by helping them develop an entrepreneurial mindset so they can create opportunities and take action in uncertain environments. Based on the world-renowned Babson Entrepreneurship program, this new text emphasizes practice and learning through action. Students learn entrepreneurship by taking small actions and interacting with stakeholders in order to get feedback, experiment, and move ideas forward. Students walk away from this text with the entrepreneurial mindset, skillset, and toolset that can be applied to startups as well as organizations of all kinds. Whether your students have backgrounds in business, liberal arts, engineering, or the sciences, this text will take them on a transformative journey.

why am i so terrible at math: Out of the Schwemmy Saloma Martin Smith, 2007-08-04

Saloma Martin Smith was born in Hawkesville, Ont. of parents who belonged to the Dave Martin order of Mennonites until their own encounter with Christ. Much of Saloma's childhood was spent in the Schwemmy, a cedar grove about four miles from St. Jacobs on the line between Wellesley and Woolwich townships. Having left school after Grade 7, she worked in factories and as a charwoman. How she studied to get her high school diploma, teacher training, and eventually her bachelor's and master's degrees while teaching and raising a family, is a story of courage and determination. Saloma realized early that life was about service, and responded to the Lord's call to be available for anything, anytime, anywhere. A twenty-year career of teaching ESL in inner-city schools in Toronto, Ontario was followed by an equally long service in Pakistan. She continues to carry out literacy work in the villages of the desert region of Sindh, whose people are among the poorest in the world.
