

# why do physical therapists hate chiropractors

**why do physical therapists hate chiropractors** is a question that arises frequently within the healthcare community, particularly among professionals involved in musculoskeletal care. The relationship between physical therapists and chiropractors is complex and sometimes fraught with misunderstanding, professional rivalry, and differing philosophies of treatment. This article explores the reasons behind the tension, examining differences in education, treatment methodologies, patient care approaches, and professional ethics. Understanding these factors helps clarify the source of discord and sheds light on how collaborative care might improve patient outcomes. The discussion will cover historical context, clinical practices, evidence-based medicine perspectives, and the impact on patient trust and safety.

- Historical and Educational Differences
- Treatment Approaches and Philosophical Conflicts
- Evidence-Based Practice and Scientific Scrutiny

- Impact on Patient Outcomes and Healthcare Collaboration

## Historical and Educational Differences

The foundational differences between physical therapists and chiropractors begin with their educational backgrounds and historical development as professions. Physical therapy emerged from rehabilitation medicine with a strong emphasis on anatomy, physiology, and evidence-based practices. In contrast, chiropractic care originated in the late 19th century with a focus on spinal manipulation and the belief in the body's innate ability to heal itself through adjustments.

## Training and Certification

Physical therapists typically complete a Doctor of Physical Therapy (DPT) degree, which involves extensive training in musculoskeletal anatomy, neurology, biomechanics, and rehabilitative techniques. Their education is heavily grounded in scientific research and clinical practice guidelines. Chiropractors earn a Doctor of Chiropractic (DC) degree, which includes studies in anatomy and spinal manipulation but often incorporates non-conventional theories such as vertebral subluxation as a cause of disease. This divergence in training contributes to differing treatment philosophies and skepticism toward each other's methods.

## Historical Rivalry

The origins of chiropractic care were marked by contentious relations with mainstream medicine and physical therapy. Chiropractors historically positioned themselves as alternative healers, sometimes leading to competition for patients and professional recognition. This rivalry has persisted, fostering a sense of mistrust and professional defensiveness that continues to influence interactions today.

## Treatment Approaches and Philosophical Conflicts

One of the primary reasons why do physical therapists hate chiropractors relates to their contrasting treatment approaches and underlying philosophies. Physical therapy emphasizes restoring function through exercise, manual therapy, education, and modalities based on biomechanical principles and patient-specific rehabilitation plans.

### Manual Therapy vs. Spinal Manipulation

While both professions utilize manual techniques, chiropractors focus predominantly on spinal manipulation or adjustments aimed at correcting perceived misalignments. Physical therapists use manual therapy as one component of a comprehensive treatment program, integrating it with strengthening, stretching, and functional training. The chiropractor's reliance on spinal manipulation alone is often criticized by physical therapists as overly simplistic and lacking sufficient evidence for certain conditions.

### Holistic vs. Mechanistic Views

Chiropractic care often adopts a holistic view, sometimes incorporating wellness and lifestyle counseling, and emphasizing the nervous system's role in health. Physical therapists, although holistic in their patient-centered approach, prioritize biomechanical correction and functional improvement. These differing worldviews can lead to professional disagreements over treatment goals and methods.

## Evidence-Based Practice and Scientific Scrutiny

Another significant factor in the tension between physical therapists and chiropractors is the emphasis on evidence-based practice. Physical therapy is widely recognized for its commitment to scientific research and adherence to clinical guidelines. Chiropractors, however, face criticism for some practices that lack robust scientific validation.

### Research and Clinical Guidelines

Physical therapists rely heavily on peer-reviewed research to guide treatment decisions, ensuring interventions are supported by clinical evidence. Many physical therapy organizations promote continuous education and integration of new scientific findings. In contrast, chiropractic practices

vary widely; some practitioners adhere to evidence-based protocols, while others maintain traditional methods that have been questioned by the scientific community.

## **Controversial Practices**

Physical therapists often express concern about chiropractic techniques that are not supported by strong evidence, such as the treatment of non-musculoskeletal conditions through spinal manipulation. This skepticism is rooted in patient safety considerations and the desire to provide effective, scientifically validated care.

## **Professional Ethics and Patient Care**

Professional ethics and standards of patient care are critical areas where conflicts arise between physical therapists and chiropractors. Issues related to scope of practice, patient referrals, and treatment transparency contribute to professional tensions.

## **Scope of Practice Disputes**

Physical therapists sometimes view chiropractors as overstepping their scope, particularly when chiropractic care is promoted as a cure-all solution. Conversely, chiropractors may feel that their role is misunderstood or undervalued by the physical therapy community. This lack of clarity and mutual recognition can lead to friction.

## **Patient Communication and Transparency**

Ethical concerns also arise regarding how each profession communicates with patients about treatment options, risks, and expected outcomes. Physical therapists advocate for informed consent based on realistic expectations and evidence. Disagreements occur when chiropractic care is perceived to promise unrealistic results or to delay more appropriate interventions.

## **Impact on Patient Outcomes and Healthcare Collaboration**

Ultimately, the discord between physical therapists and chiropractors affects patient care and the broader healthcare system. Understanding the reasons behind why do physical therapists hate chiropractors can inform efforts to improve collaboration and patient outcomes.

## **Challenges in Interprofessional Collaboration**

Professional rivalry and differing philosophies can hinder effective communication and referrals between physical therapists and chiropractors. This fragmentation can lead to inconsistent care, patient confusion, and suboptimal treatment outcomes.

## **Opportunities for Integrated Care**

Despite conflicts, there are opportunities for collaboration that leverage the strengths of both professions. Combining physical therapy's evidence-based rehabilitation with chiropractic spinal adjustments may benefit certain patient populations when coordinated properly. Promoting mutual respect and understanding can foster integrated approaches that prioritize patient-centered care.

- Recognize and respect differing educational backgrounds
- Focus on evidence-based treatments and clinical guidelines
- Enhance communication and referral networks
- Prioritize patient safety and informed consent
- Encourage collaborative care models for musculoskeletal conditions

## **Frequently Asked Questions**

### **Why is there tension between physical therapists and chiropractors?**

The tension often arises from differences in treatment philosophies, professional boundaries, and competition for patients, as both professions aim to address musculoskeletal issues but use different approaches.

### **Do physical therapists hate chiropractors professionally or personally?**

Most physical therapists do not hate chiropractors personally; however, professional disagreements and skepticism about certain chiropractic practices can create friction between the two groups.

### **Are physical therapists concerned about the safety of chiropractic treatments?**

Some physical therapists express concerns about the safety and efficacy of certain chiropractic techniques, especially spinal manipulations, due to risks of injury if not performed correctly.

### **How do physical therapists view the scientific basis of chiropractic care?**

Many physical therapists prefer evidence-based practices and may view some chiropractic methods as lacking sufficient scientific support, leading to professional criticism.

## **Is the dislike based on competition for patients?**

Yes, competition for patients can contribute to the strained relationship, as both physical therapists and chiropractors often treat similar conditions, leading to overlapping scopes of practice.

## **Do differences in education contribute to the conflict?**

Differences in educational training and clinical emphasis can contribute to misunderstandings and skepticism between physical therapists and chiropractors.

## **How do chiropractic adjustments differ from physical therapy treatments?**

Chiropractic adjustments primarily focus on spinal manipulation to restore alignment, while physical therapy uses exercises, manual therapy, and modalities to improve movement and function.

## **Can collaboration between physical therapists and chiropractors benefit patients?**

Yes, when physical therapists and chiropractors collaborate and respect each other's expertise, patients can receive comprehensive care that addresses various aspects of musculoskeletal health.

## **What steps can improve the relationship between physical therapists and chiropractors?**

Improving communication, increasing mutual understanding of each profession's scope and evidence-based practices, and focusing on patient-centered care can help reduce animosity and foster collaboration.

**why do physical therapists hate chiropractors: WHOLE** Melissa Moore, Michele Matrisciani, 2016-09-13 A five-point plan to usher you through heartache and toward a stronger, healthier place. "I know how to kill someone and get away with it." The words spoken by her father when Melissa was a teen haunt her to this day. Two years later, after confessing that he was the serial killer nationally known as the Happy Face Killer, Keith Jespersen was arrested for the murder of eight women. The pain, guilt, and shame that followed her father's conviction stigmatized Melissa for years until she figured out a way to use her emotions as fuel to free herself from self-imposed limits and set out on a journey to rebuild her fragmented life. Through her work as an Emmy-nominated investigative journalist, television host, educator, and advocate, Melissa created WHOLE, a five-step program to better develop her own approach to healing: Watch the Storm, Heal Your Heart, Open Your Mind, Leverage Your Power, and Elevate Your Spirit. Among other things, she found that the commitment to your core values makes all the difference in getting unstuck; that forgiveness gives the greatest chance of making a future not defined by the past; that there is great value in vulnerability; that creativity is essential to living a full life; and that hope is the basis for everything we feel, believe, and do. In each phase of the program, Melissa inspires you to embrace your past to find wholeness within the parts of your life that you believe to be "broken." If you are stuck in the rut of a painful experience—whether depression, trauma, pain, fear, addiction, or guilt—you will find comfort in this book's advice, self-evaluation, and action plans. WHOLE is a powerful journey of recovery and awakening that reframes the pain experience so it can be used as a way to invite understanding, growth, and transformation into your life.

**why do physical therapists hate chiropractors: More Battles Among Licensed Occupations** Edward Timmons, 2018 Primary-care physicians, chiropractors, and physical therapists (PTs) may all potentially treat patients experiencing back and neck pain—\$300 billion market. In this paper, we examine how state-level changes in chiropractic scope of practice and PT direct access to patients influence the wages, hours worked, and employment of each practitioner. Our results suggest that expansions in chiropractic scope of practice are associated with an increase in average chiropractor wages and a slight reduction in the average hours chiropractors work per week. We find little evidence that PT direct access has affected the labor market for any of the three studied practitioners.

**why do physical therapists hate chiropractors: Chiropractic Medicine** Robert Hartmann McNamara, 2018-11-27 From its very beginning, chiropractic medicine has faced challenges about the scientific validity of the treatment and the credibility of its practitioners. Since those early years, many of these criticisms have remained, but legislation, licensure, and litigation have created an environment where chiropractic care is allowed in all 50 states, and licenses are required of all chiropractors who wish to practice medicine. The implementation of the Affordable Care Act has changed the way insurance companies provide reimbursement for services by medical providers. With a greater emphasis on administratively documenting how and in what ways a particular form of treatment actually improves a patient's health, coupled with a greater level of restriction on the types of services medical providers can offer without justification and authorization, many medical providers, including chiropractors, have had to re-examine the services they provide and how they operate. This study attempts to explore the life of chiropractors in light of all the historical and current changes taking place within the medical profession. It also seeks to understand the external and internal threats posed to chiropractors, with an eye towards understanding how and in what ways the future of medicine will impact the chiropractic profession. Despite the projected growth of job opportunities for chiropractors between 2014 and 2024, which, according to the U.S. Department of Labor is occurring at a much faster than average trajectory than other professions

(U.S. Department of Labor Statistics, 2015), given the costs involved in completing chiropractic training (which can exceed \$200,000) coupled with the low salary (recent data from the U.S. Department of Labor Statistics shows that the median salary for a chiropractor is \$64,440 per year), along with the challenges of sustaining an individual practice (most chiropractors are self-employed in solo practice), these obstacles are formidable ones. This is particularly true in light of the recent development of large chiropractic chains such as the Joint, that offer spinal and neck adjustments at a fraction of the cost of a traditional provider. This ethnographic study consisted of systematic observation and interviews of 40 chiropractors in South Carolina from Fall 2016 to Fall 2017. Additionally, interviews were conducted with staff members, patients, and other medical providers, such as physicians, physical therapists, massage therapists, and representatives from the insurance industry about their understanding and experiences with chiropractic medicine. Phone interviews were also conducted with seven deans and provosts at chiropractic colleges around the country. In total, over 100 interviews and informal conversations occurred during the course of the project. All identifiers of participants and chiropractic colleges in the study were removed to ensure anonymity. Instead, pseudonyms were created that were known only by the author of the study. Additionally, data from the South Carolina Department of Labor, Licensing and Regulation was obtained to document changes in the number of chiropractors who are no longer in practice in the state between 2016 and 2017.
