why did i want to become a teacher: The Kids are Smart Enough, So What's the Problem? Richard W. Garrett, 2017-12-06 There is a national crisis in education, and it's not the highly-debated philosophical discussions or heated political arguments we are used to hearing. Survey data establishes the fact that classrooms throughout the nation suffer from the presence of a small percentage of misbehaving students. Teachers are ill-equipped to deal with these disruptive students, resulting in lost classroom time and demoralized educators who are perpetually blamed for the student's bad performance. The root cause of these misbehaving children is not a lack of intellectual ability, but a lack of character and grit; the important noncognitive skills required for success in life. The Kids are Smart Enough is a book of hope with surprisingly practical solutions revealed by listening to teachers, learning from data, and looking for the root cause. This book will help you to discover how struggling students can be reached and teachers encouraged.

why did i want to become a teacher: Surviving Emotional Work for Teachers Jean Hopman, 2020-10-29 *Surviving Emotional Work for Teachers* is a guide to improving teachers' wellbeing and practice through support of their emotional workload. The book argues that teachers should be given a formal opportunity to debrief on challenging events, allowing them to reflect on and reframe these experiences in a way that informs future practice to prevent the emotional fatigue that can lead teachers to leave the field altogether. Each chapter opens with a teacher's story, acknowledging the emotional layers present in the scenario and what learnings can be drawn from it. Each of these stories features tension between what is expected of teachers, and how they are limited to act, which is further fuelled by underlying assumptions. This is valuable reading for teachers at all stages of their career, whether preparing for the complex work ahead or making sense of past and current experiences. This book offers a reflexive process that teachers and schools can implement to facilitate the useful exploration of their emotion. Such a process is vital for the overall wellbeing of any school.

why did i want to become a teacher: Do Teachers Wish to Be Agents of Change? Allen Menlo, LeVerne Collet, 2015-04-27 This study surveyed principals and teachers in ten countries to compare principal and teacher attitudes toward the involvement of teachers in several change and development responsibilities. The participating countries were: Australia, Canada, China, Hungary, Israel, Japan, Netherlands, Singapore, South Africa, and United States. Each country administered mirror versions of a questionnaire to samples of at least 50 principals and at least 100 teachers. The questionnaires listed twenty items describing change responsibilities in which teachers might become involved. For each item, both principals and teachers assigned two teacher involvement ratings: their personal preference, and their estimate of the preference of their role counterpart. These involvement ratings produced four dependent variables: Principal Preferences, Principal Estimates, Teacher Preferences, and Teacher Estimates. For each variable, item responses were clustered to form index sub-scores that measured attitudes toward five education domains: Administration and Coordination, Human Relations, Teacher Support, Classroom Learning, and Evaluation. Systematic planned comparisons were conducted to determine the most important principal-teacher issues within and between countries, and how issues change across index domains. Typical results indicate low awareness of each other's aspirations and expectations. The first and last chapters of this book discuss the potential of teacher leaders to become agents of change within their own schools. Several social-psychological competencies are then described for these teachers in their work.

why did i want to become a teacher: Women Teachers in Africa Nelly P. Stromquist, Steven J. Klees, Jing Lin, 2017-02-10 Through qualitative research methods, this book engages in a holistic understanding of cultural, economic, and institutional forces that interact to produce the underrepresentation of women as school teachers in four sub-Saharan African countries. Comparative case studies at the national level, using a common research design, show that teaching, despite being an attractive civil service job, offers low salaries and many challenges, especially when it takes place in rural areas. Combining professional duties with demanding family responsibilities further diminishes women's ability to stay in the teaching profession. The studies in this book attempt to bridge research findings with policy by developing action plans in cooperation with ministries of education of the respective countries. Women Teachers in Africa will be of interest to academic researchers, undergraduate and postgraduate students in the relevant fields, as well as development professionals, aid agency staff and education policy experts.
